CHAPTER 1 Introduction to Earth Science
SECTION 2 Science as a Process

KEY IDEAS

As you read this section, keep these questions in mind:

- How is science different from other fields of study?
- What are scientific methods?
- How does scientific knowledge change?
- How does science affect society?

How Is Science Different from Other Fields of Study?

Art, architecture, philosophy, and science are all examples of fields of study. However, science has different goals than other fields of study. For example, a philosopher may ask questions such as “Why do we exist?” or “What is the place of humans in the universe?” Scientists do not seek to answer questions such as these. Instead, the goal of scientists is to explain natural events.

Scientists look for answers about how the natural world works by making observations and by doing experiments. As they study the natural world, scientists assume two things:

- It is possible to understand nature.
- Nature is predictable. ☑

Scientists must first assume that people can understand nature. That is, scientists assume that with the right tools and correct methods, they can find the answers they are looking for. There are many natural events that scientists do not yet understand. Scientists assume that they will someday be able to understand these events.

Scientists also assume that nature is predictable. In general, scientists observe patterns in nature. From the way a pattern repeats, scientists can predict that an event will happen in a similar way in the future. For example, suppose a scientist observes that certain weather conditions happen before a tornado forms. The scientist may predict that when these same weather conditions happen again, another tornado will form.

READING TOOLBOX

Organize As you read, make an outline of this section. Use the headings from the section in your outline.

READING CHECK

1. Explain What are two assumptions that all scientists make?
